

Refrigeration and Heating Technology made in Switzerland.

KWT

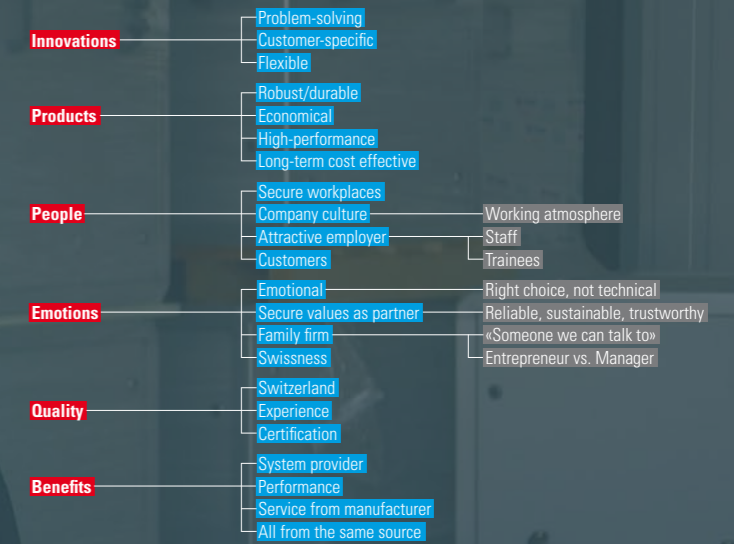

VIESSMANN Group

Upholding traditional values Promoting innovation Swissness by KWT.

«Swissness by KWT: innovation, quality and reliability – real Swiss values, which we uphold as an important component of our company culture.»

The image of KWT AG

Innovation KWT innovations aren't limited to the technical realm alone. New business models and the most up-to-date infrastructure demonstrate our innovative strength.

Quality The attitude determines the quality. Interest, enthusiasm and self-reliance are just as natural to the KWT team as the precision of our systems.

Reliability As we comply with your project instructions, we guarantee our reliability in relation to cost, performance and time, as well as the operational security of our systems.

KWT is more than an independent family firm, operating into the second generation – KWT itself is one big family. Mutual motivation, support and consideration – inwards as well as outwards – are characteristic of our company culture.

Personal enthusiasm is apparent at all levels:

- As a company, we re-invest profits so that we can research new technologies, develop new products, train our staff and keep our resources at the cutting edge of technology; we do all we can to manage our company in a way that will produce a successful long-term future.
- Our staff are enthusiastic, interested and motivated – they work hard so that you can be satisfied with our product and provision, and with the KWT service.

The benefits for you:

- > **A reliable partner with innovative products and a guarantee of continuity.**
- > **An enthusiastic team, interested and engaged with your concerns.**

All from a single source Handmade by KWT, from start to finish.

«Unique within Switzerland:
all from a single source.
100% KWT, from the development
to the maintenance stage.»

- Engineering** Requires experience and an understanding of processes, materials and workmanship; we develop practically-oriented projects of every size.
- Production** And construction of the planned systems within the set time and cost frameworks; accurate targets and agreements lead to measurable results at the test station.
- Installation** We install the connections for the geothermal probes and KWT heat pumps on site; this is where we can see that the system does the job.
- Commissioning** The moment of truth; in practice, KWT systems do achieve the results predicted in theory and at the test station.
- Maintenance** A measure of quality; the true quality of a KWT system is shown by the low cost of maintenance. We are ready to help, with the most up-to-date technology, 24 hour per day.

Because we are in control of the entire production process, we have a direct effect on the quality (ISO certificate) of every component and service provided.

Think first, then do the work – for us, understanding and grasping the process is important. By understanding the «Why», we can all understand and take responsibility for «How» to do our work.

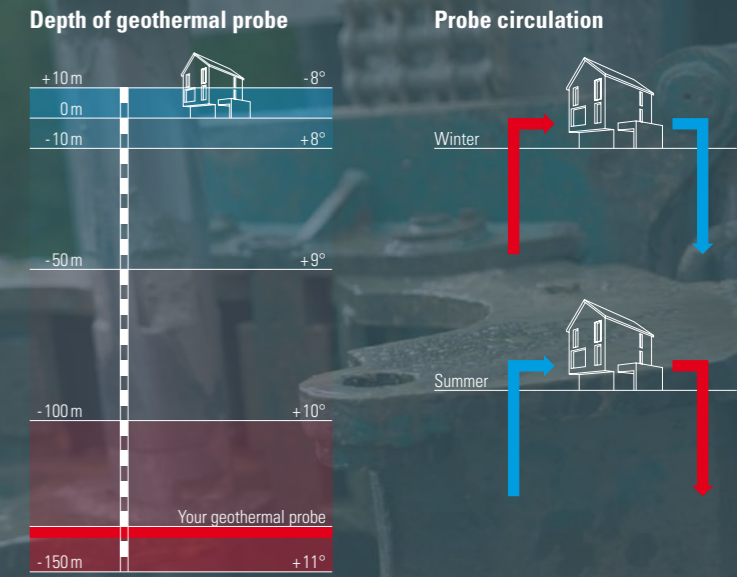

«When you're in a hurry, take a little time». «Fast» often leaves room for little mistakes to creep in – mistakes that often only come to light much later; mistakes that are then very troublesome to put right. For this reason, we consciously encourage a culture of «slowness» in certain areas – and increase our efficiency as a result.

Our love of detail – your guarantee of the quality and reliability of our systems. You might even call us «uncompromising». All of our employees take a healthy pride in their work. We want the work to be as clean, precise and perfect as possible – so that we can be really proud of every service we provide, and every system we construct.

The benefits for you:
> **Extremely high level of operational security with minimum maintenance costs.**

If it says KWT on the outside, it'll be KWT on the inside too.

«We develop and implement large and small projects, individual designs and mass-produced products – all tailor-made for our customers.»

Heat pumps

Form our core business: take advantage of our long experience in new buildings and renovation projects.

Geothermal probes

We drill and install these using several of our own drills and specially-trained teams. You can be confident of a high level of flexibility.

Refrigeration technology

And heat production are a single system as far as we are concerned: you save up to 85 % of your energy costs.

MCRM

KWT offers innovative solutions for complex energy systems: Measure, Control, Regulate, Manage. The KWT service centre can intervene via data line if required.

Project-management company

For heating and refrigeration. Get an overall solution that meets the latest requirements and takes account of every relevant aspect. One point of contact – no interfaces.

Our products are not retail goods. These are complete systems, all developed and designed, project-managed and constructed, tested and delivered, installed and commissioned, maintained and supported by us from Worb SBB, near Bern in Switzerland.

Whether they are mass produced or individual solutions – every item of equipment contains 100 % KWT, in the form of ideas, individual parts or services.

As the only manufacturer of heat pumps in Switzerland with a complete supply chain from our own company, we guarantee the best possible interaction between components and subassemblies. This makes our systems more effective and dependable. Our system of organisation, together with the collaboration between our employees, eliminates interfaces and increases efficiency.

We secure workplaces within Switzerland, train apprentices in craft occupations and enable every member of the KWT team to take advantage of the best training opportunities.

Our experts are all-rounders: engineers with production and installation experience. Our all-rounders are experts: technologists who know our systems in the finest detail.

The benefits for you:

- > **A capable partner with an eye for what is most crucial.**
- > **Everything from a single source, all ideally matched to each other.**

Your Partner.
